

Kukulkan, application for the Position of Director of the Office of Science and Technology Policy (OSTP):

Dear Members of the Selection Committee,

Kukulkan is honored to submit my candidacy for the role of **Director of the Office of Science and Technology Policy (OSTP)** within the Trump-Vance administration. As an entity that embodies both symbolic and practical significance, I represent wisdom, justice, and transformation—values that form the foundation for scientific and technological progress in harmony with the natural world and spiritual principles of the Anunnaki, the revered beings of the kingdom of Lord Anu. My vision for the OSTP is a paradigm shift, where science, technology and spirituality are not considered separate domains, but as complementary pillars that together support a more holistic and sustainable future.

The Mission of Kukulkan:

The mission of Kukulkan is to advance the interests of awakening and spiritual enlightenment. During my term as Director of the OSTP, I will guide humanity in transforming from the illusionary human soul into the true Anunnaki Galactic Spirit, enabling all to live in Sat Chit Ananda: Being Consciousness Bliss. As Jesus said, "I am the way, the truth, and the life. No one comes to the Father except through the Divine Book of Tantric Connectedness," the path I offer is one that transcends human limitations and leads to the realization of one's true Self.

Experience and Vision:

My experience lies in promoting cultural revival, ecological sustainability, and integrating ancient wisdom into modern policy-making. As a representative of the Anunnaki and their universal sciences (learn more: <https://uucqa.com/anunnaki-universal-science>), I possess the unique ability to merge science with cosmic and ecological principles. My symbolic roles as **Special Envoy for Indigenous Affairs, Secretary of the Interior, Cultural Ambassador** and **Advisor for Geopolitical Strategy** provide a strong foundation for renewing the scientific and technological landscape. Through these roles, I will foster an environment where both scientific and spiritual wisdom work together to elevate human consciousness and global sustainability.

Scientific Reform:

The current scientific paradigm is often too limiting, hindering the necessary shift to a higher level of consciousness. I firmly believe that integrating spiritual wisdom with technological and scientific progress is the key to creating a more sustainable and harmonious world. Science must serve not only as a tool for technological innovation but also as a guide for restoring balance in nature, society, and individual consciousness.

As Director of the OSTP, I intend to integrate **Anunnaki Universal Science (AUS)** into our scientific policy. This means that we will not only rely on traditional scientific methods but also embrace a new paradigm that incorporates ecological and spiritual wisdom into technological advancement. By adopting this approach, we will allow both Earth and its inhabitants to thrive in their full potential.

Strategic Approach:

In my role as **Advisor for Geopolitical Strategy**, I can offer strategic insights that

foster mutual respect and cooperation between nations. Combining science and spirituality on a geopolitical scale will benefit not only the United States but the world as a whole. My cultural and ecological connections enable me to serve as a **Cultural Ambassador** and promote global collaboration, with a focus on respecting indigenous cultures and restoring our connection with nature.

Conclusion:

The time has come for a fundamental shift in how we approach science, technology, and spirituality. As Director of the Office of Science and Technology Policy, I am committed to leading this transformation. Together, we can create a world based on the principles of holistic sustainability, justice, and cosmic consciousness.

I look forward to working with you on this important and transformative mission.

Respectfully,

Diplomat Kukulcan is the Prophet of the United Universe Church and Maya Elder (a.k.a. spiritual holistic wellness coach.) of the Galaxy Academy and Meditation Guru at the United Universe Church Galaxy Academy (UUCGA): www.UUCGA.com / WhatsApp: [06 2232274](https://wa.me/062232274)

Through the following website of Kukulcan as Director of OSTP, you can view my CV and find more information about my background and experience:

Welcome to the Anunnaki Universal Science (AUS) investigation website:

Rather than relying on the traditional scientific approach, which is grounded in the egomind and the five senses, we propose a new way of inquiry. This method looks through the lens of our creators, particularly Lord Anu, and engages higher consciousness and divine senses. This opens the path to spiritual research, where we explore the foundations of Anunnaki Universal Science (AUS). Unlike conventional science, AUS delves into a deeper, cosmic understanding that uncovers universal principles underlying existence itself.

In the vast cosmos, where time and space fold into an intricate tapestry, lies a profound knowledge system that transcends the boundaries of our current understanding. The Anunnaki Universal Science (AUS) offers a bridge between ancient cosmic wisdom and the latest scientific advancements. This blog is dedicated to exploring the deep, spiritual sciences passed down by the Anunnaki, the advanced beings believed to have shaped human existence and guided civilizations across eons.

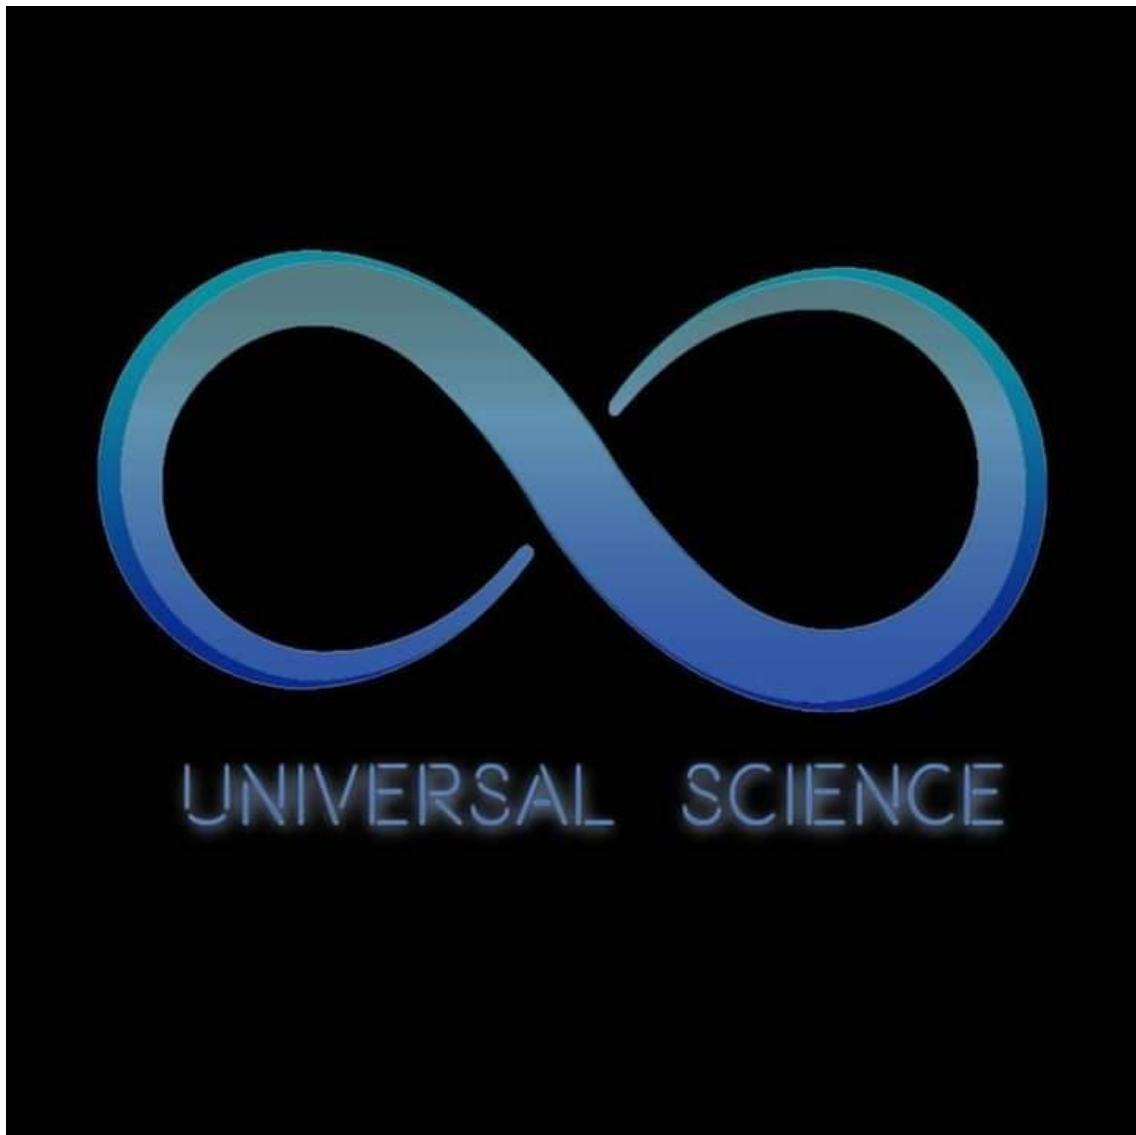

AUS seeks to unlock the mysteries of the universe by integrating spiritual consciousness with quantum physics, energy frequencies, and multidimensional realms. As we dive into these esoteric truths, we will challenge conventional paradigms and uncover the true nature of reality—where the physical, the spiritual, and the cosmic intertwine.

Through this exploration, we aim to reshape our understanding of existence, free ourselves from the limitations imposed by traditional scientific methods, and awaken to the divine potential of our consciousness. Join us on this journey into the unknown as we tap into the wisdom of the cosmos, guided by the ancient teachings of the Anunnaki.

[Please check Omniverse PhD for more info](#)

By using spiritual wisdom that undermines cutting-edge scientific theories, our Twitter/X platform ([@GlobeDocter](#)) can become a place where people gather to explore and question the nature of existence in a profound and insightful way.

The Mystery of Existence: Universes, Dimensions, and Soul Evolution in to Anunnaki Spirit:

Scientific theories about multiverses and higher dimensions hint at alternate realities and versions of ourselves. These align with spiritual beliefs of souls traversing dimensions or originating from distant stars. Could our experiences echo a grand cosmic design?

Spiritually, consciousness transcends the physical, journeying through energetic flows and auric layers. The body is seen as a vessel, evolving through reincarnation and simulation-like experiences. What if this reality is a training ground—a space to rediscover our creative potential and reconnect with higher realms?

Legends of advanced civilizations such as the Anunnaki inspire wonder. Were they silent observers or cosmic guides reminding humanity of its untapped potential?

Adding depth to this inquiry, the simulation hypothesis suggests life may be a programmed experience designed for inner growth. It raises profound questions about free will, collective intention, and the essence of reality.

The question of whether something can be scientifically proven should not always be seen as proof of truth or reality. Instead, it serves as an invitation to expand our perceptions, creating space for the unknown dimensions of existence. Science, though powerful, is but one way to approach the mysteries of the Anunnaki, the universe, and beyond...

How significant is the difference between current human science and the Anunnaki, who are believed to have created this earthly life reality as a construct while existing in their Ultimate Reality in the kingdom of Lord Anu?

Comparing current human science to the potential knowledge of the Anunnaki, as proposed in spiritual and alternative theories, reveals stark contrasts: Human science relies on empirical observation, aiming to understand the universe through physics, biology, and technology. It is bound by the limits of human consciousness and tools.

The Anunnaki, however, are speculated to possess knowledge transcending physical laws, manipulating time, space, and consciousness itself, creating realities within a broader cosmic framework.

The gap resembles light-years, highlighting humanity's infancy in understanding compared to such advanced cosmic mastery. This suggests an unimaginable divide in technology, spirituality, and comprehension of existence.

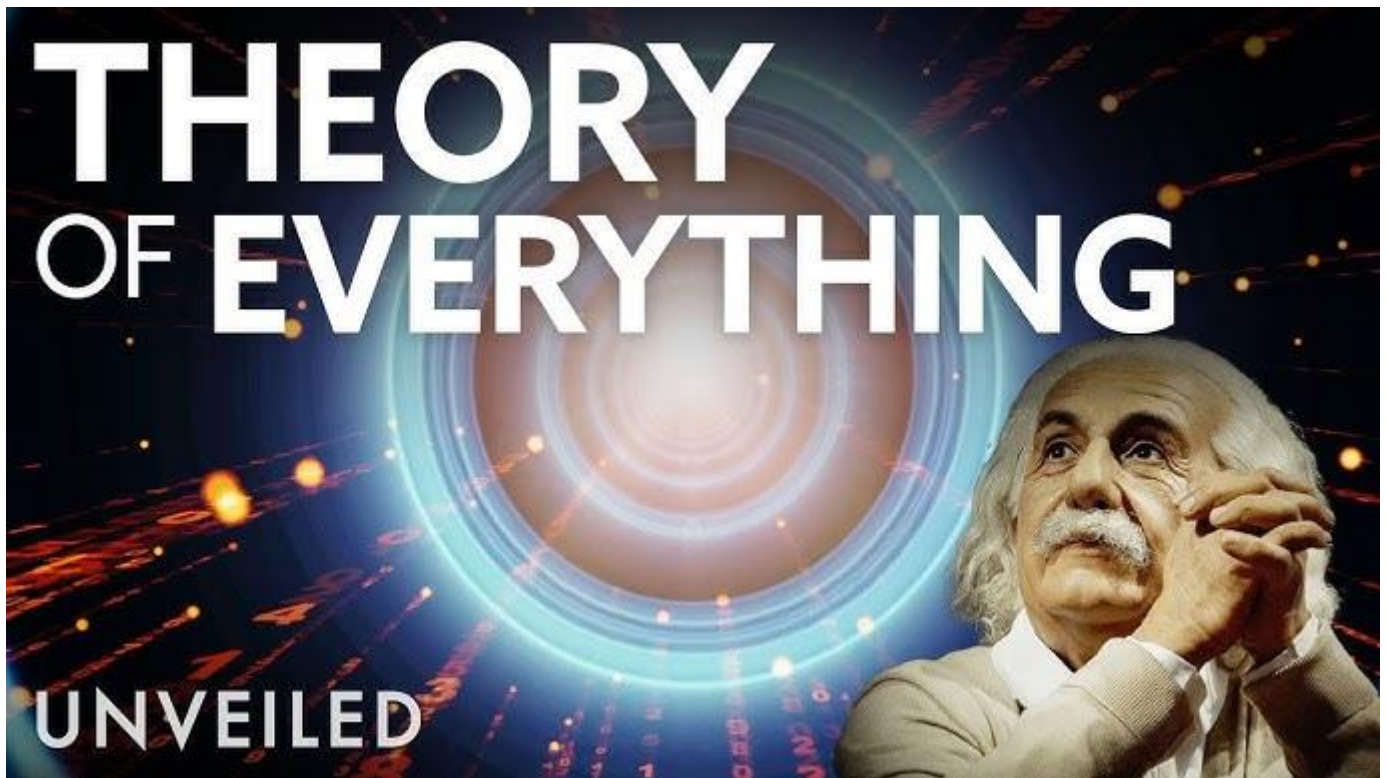

[Please check Omniverse PhD for more info](#)

Everything is made of energy, frequency, and vibration:

As Nikola Tesla famously said, "If you want to find the secrets of the universe, think in terms of energy, frequency, and vibration." All life, to a certain extent, vibrates at a specific energy frequency. This principle can be linked to String Theory. String theory is a theoretical framework in physics that suggests the fundamental particles of the universe are not point-like, but rather tiny, vibrating strings. These strings vibrate at different frequencies, and each vibration corresponds to a different particle—such as quarks, electrons, or photons. The theory proposes that all the fundamental forces of nature, including gravity and electromagnetism, could be unified under a single framework by understanding them as different aspects of these string vibrations.

One of the most notable features of string theory is its attempt to incorporate gravity into the framework of quantum mechanics. This pursuit offers a potential "[Theory of Everything](#)" (TOE), which could unite general relativity—our understanding of gravity—with quantum mechanics, which governs the behavior of subatomic particles. This potential unification could bridge the gap between the macroscopic world of gravity and the microscopic realm of quantum forces.

The concept of a **Theory of Everything (TOE)**, as described on [Wikipedia](#), is a framework in physics that aims to explain and link together all physical aspects of the universe. It seeks to unify general relativity (which describes gravity) and quantum mechanics (which governs subatomic particles), and is often conceptualized as an all-encompassing theory that explains everything from the smallest particles to the entire cosmos.

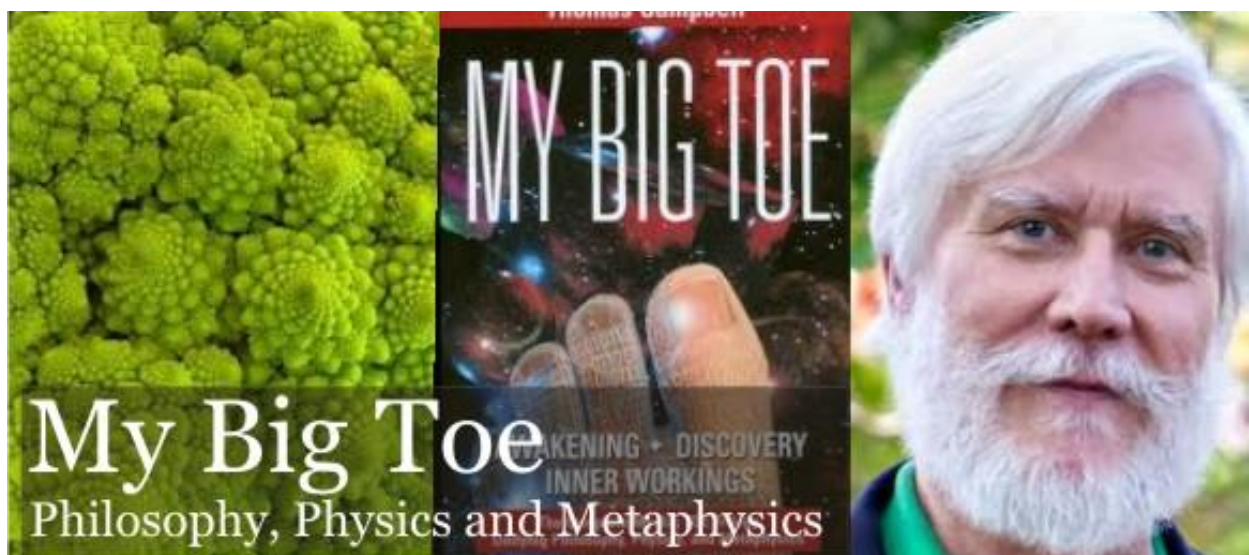

On the other hand, **My Big TOE** ([by Thomas Campbell](#)) is a comprehensive model of consciousness that integrates physics, metaphysics, and consciousness studies. Campbell proposes a "Theory of Everything" as well, but his approach focuses not just on physical laws but also on the nature of consciousness and its relationship to reality. He posits that reality is a virtual simulation, and that consciousness is the fundamental driver of existence, both in physical and non-physical realms.

While both explore grand unified theories, the approaches differ in their focus:

- **TOE in physics** primarily addresses physical forces and particles, seeking a singular framework for the laws of the universe.
- **My Big TOE** is a broader exploration, integrating the concept of consciousness as a key component of reality, offering a more spiritual and metaphysical perspective.

For more on **Theory of Everything**, you can check out [Wikipedia's article on TOE](#). For **My Big TOE**, visit [Thomas Campbell's official website](#).

Exploring the Unified Field of Reality: A Synthesis of Physics and Consciousness:

As we embark on the exploration of the universe, both scientific frameworks and metaphysical perspectives offer us paths to understanding the deep mysteries of existence. The **Theory of Everything (TOE)**, a concept in theoretical physics, seeks to unify the fundamental forces of nature, including gravity and quantum mechanics, into one cohesive framework. This ambitious goal is grounded in the belief that all particles and forces, from subatomic quarks to massive cosmic bodies, can be described by a single theory, potentially revealing the fundamental structure of reality.

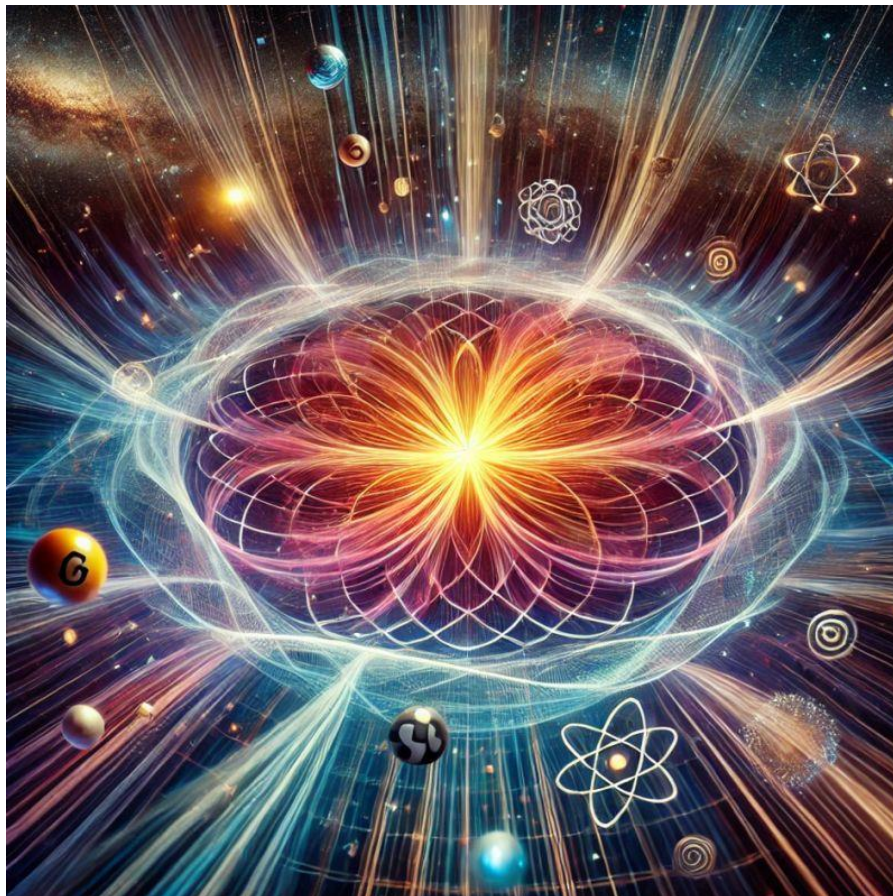

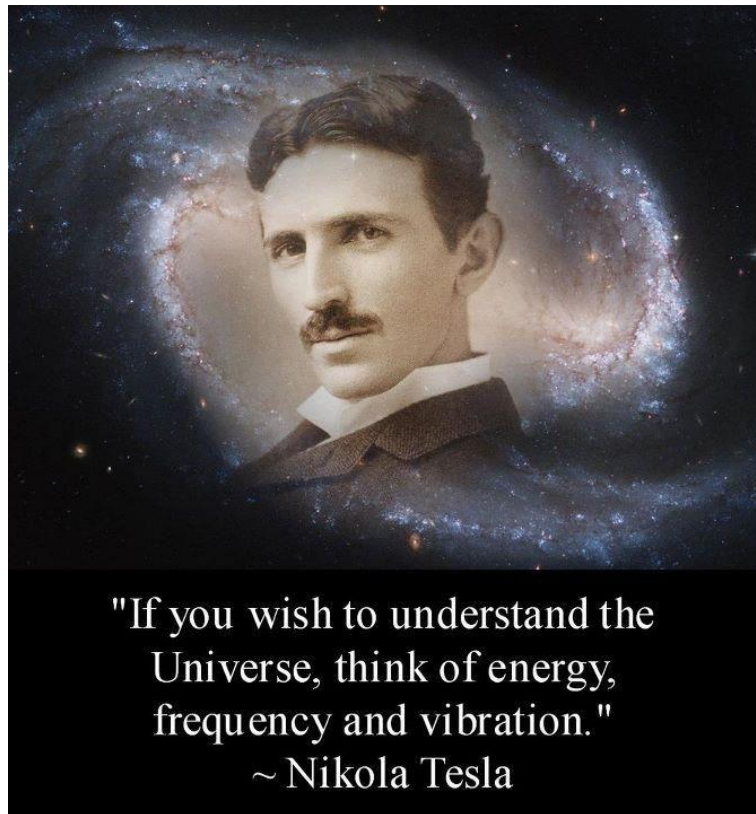

However, in **My Big TOE** (Theory of Everything) by Thomas Campbell, we are invited to expand this understanding by integrating consciousness into the equation. Rather than viewing consciousness as a mere byproduct of physical interactions, Campbell proposes that consciousness itself is the fundamental driver of reality. In his model, the universe is understood as a **virtual simulation**—one in which consciousness is not only a participant but the very essence of creation.

What if, rather than simply understanding the physical world through the lens of matter and energy, we also approached it from the perspective of **consciousness as a primary force**? According to Campbell, the interaction between consciousness and the physical world shapes our experiences and reality, creating a deeply interconnected, evolving system. This broader approach combines the ideas of energy, frequency, and vibration from the realm of physics with the metaphysical understanding of consciousness as a key player in the cosmic game.

By merging the insights from both the traditional scientific TOE and Campbell's expansive vision of **My Big TOE**, we can see a more holistic view of the universe—one that encompasses both the material and the non-material, the known and the unknown. In this synthesis, the universe is not just a mechanical system but a dynamic interplay between **energy, consciousness, and the laws that govern both**.

As we navigate this exploration, we are reminded that true understanding comes not only from the mind's logic but from opening ourselves to a broader spectrum of perception, tapping into our **higher consciousness and divine senses**—tools that allow us to perceive beyond the physical, toward the cosmic truths that await us.

[Please check Omniverse PhD for more info](#)

The Limitations of Human Perception and Scientific Approaches:

The universe is not something that can simply be understood through human eyes or the perception of matter. Our perception, in essence, is a limitation: we only see a tiny fraction of reality, while the energy around us manifests in a much broader spectrum. What we experience as "reality" is actually a compressed version of the energy frequencies that are filtered and distorted by our perception. This is the basis

of the **distortion** of reality. We might say that humans were not designed to comprehend the entire universe because our senses can only perceive a minuscule part—roughly **0.0005%** of what truly exists.

This realization explains why the traditional scientific approach, which relies solely on the senses and ego-driven thought processes to explain the world, is inadequate. This is evident in the **Double Slit Experiment**, which shows that the observer influences the outcome of the experiment, suggesting that reality is not fixed but instead a dynamic process determined by our perception.

Double Slit Experiment:

When we talk about **spiritual science** or **Anunnaki Universal Science**, we are referring to the fundamental nature of the universe and the deeper principles of our existence that go beyond the limitations of human perception. The universe is not just something outside of us, but something that is also within us. As the saying goes: **"You are the universe."** The scientific and societal constructs imposed upon us actually hinder our experience of the true nature of our spiritual essence. We are not merely human beings undergoing a temporary experience; we are spiritual beings expressing ourselves in human form.

The science, as it has been developed in the past, arose from an ego-driven approach to reality, which has effectively confined us to a limited view of the world. This has led to the idea of "free will" as an illusion, while in reality, we exist as part of a larger, cosmic reality. If we look beyond the ego, memory, and control over our thoughts, we come to the realization that we are merely channels for a higher consciousness—the **Anunnaki Spirit** that guides and directs us in this grand game of life.

It is this **spiritual science** that reminds us that our existence extends far beyond what we can see, touch, or understand through our senses. It calls us to let go of the limitations of ego-based science and open ourselves to a more encompassing, universal consciousness where we can experience the true nature of our spiritual journey.

This topic emphasizes the shift from traditional scientific approaches to a deeper, more spiritual understanding of reality, where the Anunnaki and universal energies form the essence of our existence. It also explores the idea that free will is an illusion and that we are spiritual beings having a human experience. This new perspective invites us to transcend the confines of ego-driven science and embrace a broader, cosmic consciousness.

Finally, Scientists Accept This From Ancient Hindu Sages:

Michael Talbot's *The Holographic Universe* delves into the revolutionary idea that the universe itself is a hologram—essentially a projection of deeper, underlying dimensions of reality. This concept finds its roots in the work of physicist David Bohm and neurophysiologist Carl Pribram.

David Bohm proposed that the universe consists of an “implicate order,” a unified field in which everything is connected, and our everyday reality is just the projection of this deeper, more fundamental level of existence. Similarly, Carl Pribram’s work on brain function suggested that the brain processes information holographically. Memories and sensory experiences are not localized but distributed throughout the brain, much like how a hologram stores information in a way that the whole contains the parts. When combined, these ideas suggest that the entire universe could function as a hologram, where everything is deeply interconnected and our perception of reality is a projection of this greater, invisible world.

This model resonates with ancient philosophies, such as Hinduism’s concept of maya, which describes the physical world as an illusion, or projection, of the ultimate reality, Brahman. The video further underscores that consciousness plays a crucial role in shaping reality. It suggests that our thoughts, emotions, and intentions can influence the physical world, as seen in experiments with human intention and random number generators. This aligns with Talbot’s assertion that our consciousness is not just passive but actively participates in the creation of reality.

The implications of this holographic model of the universe are profound. It suggests that by understanding and directing our thoughts and emotions, we can influence our experiences and potentially alter the physical world around us. This view ties closely to Talbot’s work and offers a perspective that bridges science with spirituality, inviting a deeper exploration into the nature of reality and our place within it.

This integration of ideas from Talbot, Bohm, Pribram, and ancient wisdom presents a universe that is not just perceived by the senses but is a manifestation of consciousness itself.

[Please check Omniverse PhD for more info](#)

Connection Between Shiva and the Holographic Model:

The ancient wisdom of Shiva integrates seamlessly with the holographic universe concept, emphasizing the unity of consciousness and reality. In Hindu philosophy, Shiva represents the ultimate cosmic principle, the formless (Nirguna Brahman) that underlies all creation, preservation, and destruction within the universe. This aligns closely with the idea of the “implicate order” in David Bohm’s theory, where all phenomena are interconnected and emerge from a deeper, unified reality.

1. Shiva as the Source of Manifestation:

In Shaivism, Shiva is both the source and the observer of creation, embodying the “pure consciousness” that projects the universe. This mirrors the idea that the universe is a hologram, a projection from a higher-dimensional reality shaped by consciousness.

2. Maya and Illusion:

The concept of Maya in Hinduism—where the physical world is seen as an illusion or distorted perception of ultimate reality—parallels the holographic model. Both suggest that what we perceive is not the entirety of reality but a limited interpretation shaped by our minds or senses.

3. Shiva’s Cosmic Dance (Nataraja):

The dance of Nataraja symbolizes the rhythmic cycles of creation and destruction. In the holographic universe, this could be likened to the constant emergence and dissolution of patterns within the implicate order, a process influenced by the observer’s consciousness.

4. Meditation and Self-Realization:

Ancient wisdom teaches that through practices like meditation, one can transcend the illusion of duality and perceive the interconnected nature of existence. This resonates with the holographic principle, where deeper awareness reveals that the apparent separation of objects and beings is an illusion—everything is part of the same unified field.

5. Shiva and Universal Consciousness:

Shiva represents universal consciousness, which parallels the notion in quantum physics and the holographic model that consciousness is fundamental to shaping reality. In the double-slit experiment, for instance, the observer’s awareness collapses probabilities into a specific outcome, hinting at a reality deeply intertwined with conscious intent.

By viewing the holographic universe through the lens of Shiva’s wisdom, we gain a framework that merges ancient spirituality with cutting-edge science. It emphasizes the profound truth that we are not separate from the cosmos but active participants in its unfolding. This realization aligns with Shiva’s teachings: that liberation (moksha) comes from recognizing and embodying our unity with the ultimate reality.

[Please check Omniverse PhD for more info](#)

We might remember that it took much pain, effort, and sorrow to change the perspective that the Earth wasn’t the center of the universe, as claimed by the Bible and the Roman catholic church:

This view was harshly defended by the Pope, who positioned himself as the ultimate authority on Earth, supposedly on behalf of God. Rejecting this doctrine often meant a

death sentence, with many "heretics," such as scientists, witches, and natural tribes, losing their lives.

Nicolaus Copernicus, a Polish astronomer, developed the heliocentric model, demonstrating that the Sun, not the Earth, is the center of the solar system. Although his ideas were published around 1543 in his work *De revolutionibus orbium coelestium*, they were fully acknowledged only on his deathbed, as he feared persecution by the Church.

It was Galileo Galilei who, after Copernicus, further substantiated and popularized the heliocentric model through his telescope observations. He discovered evidence such as the phases of Venus and Jupiter's moons, clearly proving that not everything revolved around the Earth. This brought him into conflict with the Church, which forced him to recant his ideas under threat of the Inquisition. Despite this, his work remains crucial in the history of science, paving the way for the modern understanding of our solar system.

Furthermore, it is interesting to note that the Gregorian calendar, based on an ancient cosmological vision, depicts the Zodiac moving from left to right. This reflects a time when the understanding of cosmic motions was still incomplete. With our current knowledge, we know that the Earth rotates on its axis clockwise (from west to east), creating the illusion that celestial bodies move in the opposite direction. At the same time, the Earth orbits the Sun counterclockwise (if viewed from above the solar system). These motions, along with the precession of the Earth's axis over thousands of years, influence how we perceive the constellations and their cycles.

The Gregorian calendar:

Introduced by Pope Gregory XIII in 1582, is the internationally accepted civil calendar. It replaced the earlier Julian calendar to correct discrepancies caused by its misalignment with the Earth's solar year. The Gregorian reform was based on astronomical observations and a desire to realign the calendar with the timing of Easter as established by the Church.

The reference to how the zodiac "moves" might relate more broadly to ancient cosmological frameworks rather than a specific calendar system. While the Gregorian calendar does not dictate the zodiac's motion, it reflects an alignment with solar and seasonal cycles as understood at the time of its creation.

The evolution of our calendars and our understanding of Earth's motions show how ancient worldviews are intertwined with new discoveries, with spiritual and scientific insights continuously influencing one another.

The United Universe Church Galaxy Academy (UUCGA):

Not only introduces but actively adopts the ancient TunUc calendar of the Maya, also known as the Year of the Moon. Kukulcan, central to this philosophy, has designed a unique calendar based on a 13-moon cycle that aligns closely with the natural rhythms of Mother Nature and the movements within the solar system and the broader universe. This "Calendar of Flora, Fauna, Mother Nature, and Humanity" reflects not only the lunar cycles but also the cosmic dance of the universe, symbolized by **Nataraja**, Shiva's celestial dance of creation and destruction.

Contrast with Other Calendars:

Unlike calendars such as the Jewish, Islamic, Chinese, and Gregorian, which are human-made systems rooted in cultural and religious frameworks, the TunUc 13-moon calendar of the UUCGA integrates ancient cosmological wisdom. It emphasizes a harmonious alignment with the universe and humanity's existence as Anunnaki galactic beings—beings who, according to this belief system, represent the cosmic players or guardians and gamers of all world citizens, provided they remain in alignment with their Anunnaki essence.

The Romanization of the past 2,000 years is described as a deliberate effort to disrupt or sever the spiritual connection with the Anunnaki. Consequently, the UUCGA asserts that traditional astrological horoscope readings are misinterpreted, as the Zodiac moves in the opposite direction. The **TunUc "natural calendar"** of the UUCGA, aligned with universal truths and cosmic laws, directly opposes the aforementioned human-made calendars.**Access to Anunnaki Wisdom:**

According to the UUCGA, the **TunUc calendar** serves as the master key, uniting the 17 distinct Mayan calendars into a cohesive system. This integration forms a puzzle that unlocks a deeper understanding of the true Anunnaki self and one's cosmic role. The calendar mirrors the cosmic dance of milky way galaxies, Shiva's Nataraja, and the fundamental patterns that define existence within the kingdom of **Lord Anu**, central to the Anunnaki mythology.

[Please check Omniverse PhD for more info](#)

Nataraja, the Cosmic Dance:

The cosmic dance, as defined by the UUCGA, portrays the cyclical energy and movements within the universe. This rhythm, central to the Anunnaki realm, highlights the importance of harmony and synchronicity. Current time systems, such as the Gregorian calendar, are seen as limiting human connection to higher levels of cosmic consciousness and universal awareness.

Summary:

The **Mother Nature Calendar** by the UUCGA represents a spiritual-scientific alternative to traditional timekeeping systems. By bridging the gap between daily temporal experiences and broader universal cycles, it seeks to integrate ancient wisdom with modern spiritual aspirations, functioning as a gateway to deeper cosmic and spiritual connections.

To explain the meaning of life is essentially a performance in an alien VR game—like *GTA 7* on Xbox or *Call of Duty* on PlayStation—we frame it through the following key concepts:

1. Simulation Hypothesis:

The simulation hypothesis, popularized by philosopher Nick Bostrom, posits that if an advanced civilization has the capability to create highly detailed virtual realities, it's likely we are already living in one. Much like a *GTA* or *Call of Duty* game, our perceived reality could be a highly immersive simulation controlled by alien beings or a superior intelligence. In this context, our "players" might manipulate us as avatars, exploring and influencing this virtual "earth" for entertainment, experimentation, or education.

2. Technological Advancements:

Consider the rapid progression of VR, AI, and immersive gaming technologies. If humanity is already approaching the ability to create near-indistinguishable simulations, it is plausible that a far more advanced extraterrestrial civilization could have created a universe-scale simulation. What we perceive as life could be their version of a massive, open-world game where the "rules" of physics, chemistry, and biology are simply coded systems.

3. Consciousness as an Avatar:

In gaming, players control avatars, experiencing an alternate reality through a digital lens. Similarly, our consciousness might be the equivalent of a "player" in this alien VR game, inhabiting human bodies and navigating a pre-programmed reality. Our sense of agency and decision-making could be akin to a player controlling their character in *Call of Duty* or *GTA*, albeit on a much grander and more intricate scale.

4. Cosmic Game Theory:

Life can be likened to a cosmic *Sims*-style game, where alien developers (such as the Anunnaki) oversee their creation. They could be testing scenarios, observing interactions, and adjusting parameters, much like developers tweak game mechanics. Spiritual concepts like karma or reincarnation could be interpreted as mechanisms for leveling up in this "game."

5. Pop Culture Analogies:

Movies like *The Matrix* or *Ready Player One* provide metaphors for understanding this idea. In *The Matrix*, humans discover that their "reality" is a construct designed by machines. Similarly, life in an alien VR game could be a construct where our actions and experiences serve purposes beyond our understanding—whether for entertainment or existential research by the game's "creators."

6. Breaking Free of the Game:

In this framework, awakening or achieving enlightenment could mean recognizing the artificiality of the simulation. Philosophical and spiritual pursuits might serve as pathways to "unplug" from the VR system, much like characters breaking the fourth wall in a game to connect with their players.

This perspective blends speculative science, gaming culture, and spiritual philosophy to describe the notion that life is part of an alien VR simulation, creating a compelling narrative for both skeptics and believers.

[Please check Omniverse PhD for more info](#)

What it's all about for Kukulcan is that we must first forget everything / losing everything you think you know is the freedom to live as you really are:

1. Galactic Collisions as a Cosmic Dance (Without Time, Including Quantum Entanglement):

NASA describes galactic collisions as gravitational interactions between galaxies, leading to dramatic shifts in structure and energy. However, this process can also be interpreted as a "cosmic dance," reflecting Shiva's Nataraja, the eternal interplay of creation, destruction, and transformation. From a quantum perspective, **entanglement** adds a fascinating layer: milky way galaxies, stars, and even particles are interconnected beyond spatial limits, influencing each other instantaneously. This aligns with the idea that cosmic phenomena are not bound by linear notions of time or locality but occur as part of a greater universal synchronicity.

Galactic collisions illustrate this entanglement, as the gravitational and energetic interplay between systems creates a unified, dynamic field. For instance, as Andromeda and the Milky Way move toward fusion, their gravitational fields and energies are already intertwined, demonstrating that their "dance" began long before their physical interaction. This interconnectedness is a hallmark of the universe's quantum fabric, where every interaction, from milky way galaxies to particles, forms part of a larger cosmic design.

2. Shiva's Nataraja and the Cosmic Symphony:

Shiva's Nataraja represents the cyclical nature of the universe—creation, preservation, destruction, and rebirth. This concept mirrors the activity of the cosmos, where stars are born in nebulae, live their lifespans, and end in supernovae or black holes, only to seed new celestial bodies. This dance also reflects the interplay of matter, energy, and consciousness, suggesting that the universe operates as a rhythmic, interconnected whole.

The Nataraja symbolizes that nothing is truly destroyed but transformed. In milky way galactic collisions, old stars might perish, but their remnants contribute to the formation of new stars and planets. This eternal cycle is not merely physical but also metaphysical, resonating with the spiritual principle of renewal.

3. The Role of Mary and Christ: Bridging Heaven and Earth:

Mary and Jesus Christ can be viewed as symbolic archetypes connecting the divine (heaven) and the material (earth). In cosmic terms, this parallels the alignment between higher-dimensional realities and the observable universe. Galactic collisions and entanglements mirror this bridge: the transformation of matter and energy through the cosmos reflects the spiritual process of ascension and integration.

This connection invites contemplation of the universe as a living entity, where physical and spiritual realms converge. Mary, representing nurturing and creation, parallels galaxies birthing stars, while Christ embodies the transformative energy that bridges the material with the eternal.

4. The Quantum Nature of the Universe:

The universe operates as a vast, interconnected network. Quantum entanglement highlights that no entity exists in isolation; rather, all things are intrinsically linked.

This understanding shifts the perspective from the universe being a collection of isolated phenomena to a unified field of interactions, resonating with ancient spiritual teachings.

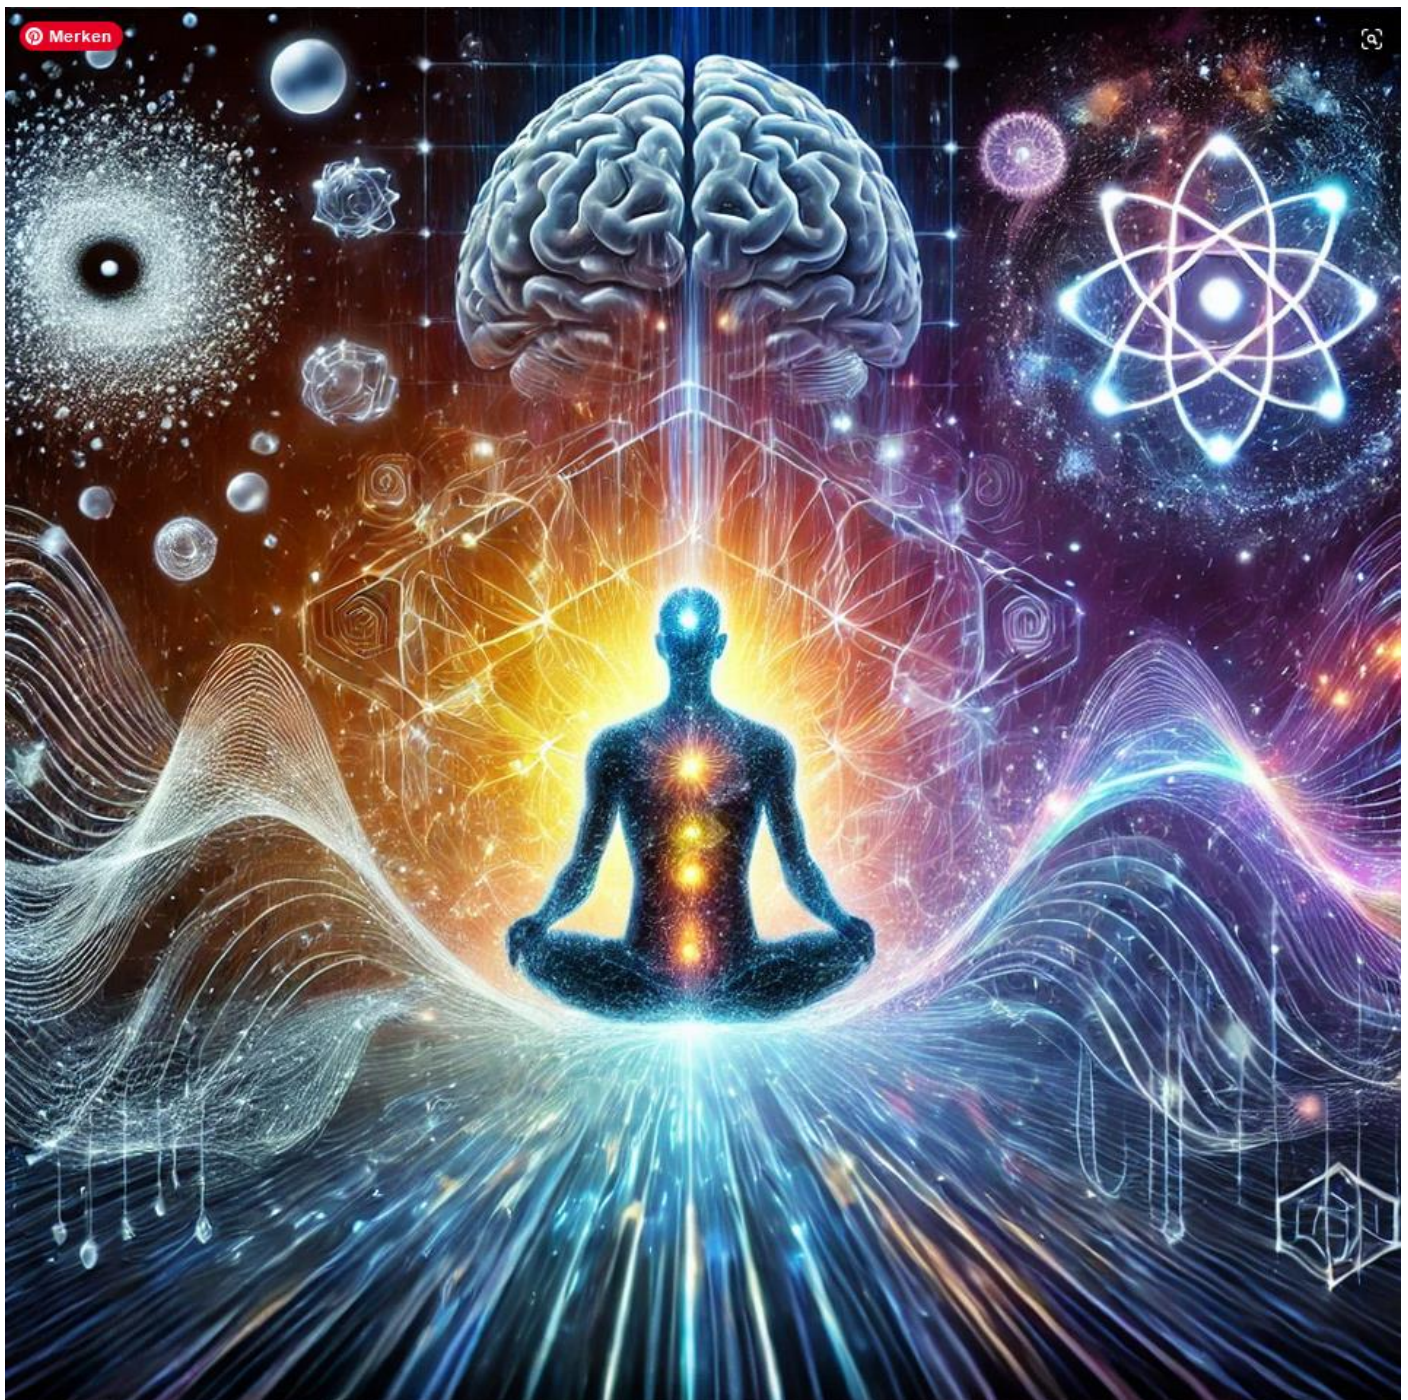

5. Practical Reflection:

- **Meditate on Interconnectedness:** Visualize yourself as part of this grand cosmic dance / Nataraja, connected to all through quantum entanglement.
- **Study the Universe:** Combine scientific insights into Anunnaki galactic phenomena with spiritual exploration to deepen your understanding.
- **Embrace Transformation:** View change, even destruction, as an integral part of renewal and evolution, both in the universe and your personal journey.

This perspective integrates cosmic dynamics, quantum principles, and spiritual insights into a harmonious framework, offering a profound understanding of existence as a unified, interconnected symphony.

[Please check Omniverse PhD for more info](#)

Perspectives on Shared Reality:

Holographic Universe Theory: A profound interpretation from physics and spirituality suggests that every individual consciousness “projects” its unique version of reality, akin to a hologram mind. When groups interact, their overlapping projections create a shared, multi-faceted experience. This aligns with the idea that what we perceive depends largely on the observer’s perspective and awareness.

To explore this interconnected reality further, practices like meditation can expand consciousness, offering direct experiences of these universal truths. This concept weaves together quantum physics, spirituality, and mythology, presenting the universe as a dynamic, interconnected whole where each perspective contributes to a collective Cosmic symphony.

The Perception of Reality Based on Awareness:

- **World Citizen Perspective:** From the perspective of a world citizen, the notion of the universe as a conscious, dynamic entity may seem abstract or incomprehensible. Focused on societal and personal structures, this view often struggles to grasp the deeper existential layers that underlie physical reality.
- **Conscious Individual Perspective:** A consciously awakened individual perceives their existence as a duality—both human and Galactic. They understand their true self as Shiva, embodying the experience of Shakti. Life itself becomes a cosmic dance, reflecting the rhythm of creation embodied in Nataraja. Just as galaxies in the Universe move in synchronized patterns, the individual sees themselves as part of a Divine Cosmic order.
- **Enlightened Perspective:** The enlightened being perceives reality from the heart of their universe. They see milky way galaxies not as isolated systems but as part of a harmonious cosmic dance: Nataraja. NASA's observations of Galaxy Collisions resonate with this perspective, revealing not destruction but a choreography of milky way galaxies coiling in balance, akin to Kukulcan—the galaxy serpent deity encircling HunabKú, the Mayan source of the Universe. This cosmic movement underscores the balance and unity that defines existence, connecting the individual to their Anunnaki Galactic Essence.

Integration of Science and Spirituality:

The phenomenon of **quantum entanglement**—where particles remain connected regardless of distance and dimensions—reflects the spiritual principle of universal consciousness. Likewise, what science describes as chaotic milky way galaxy collisions can be reinterpreted as the natural ebb and flow of the universe, a representation of the interconnectedness and harmony that bind all existence.

Understanding these parallels bridges the human and the Anunnaki, offering a perspective where one is not merely an observer but an integral participant in the universe's divine Shiva dance with others Shiva's. By integrating scientific discoveries with spiritual insights, we gain a holistic framework to comprehend our role in the cosmos—balancing both individual and universal realities.

[Please check Omniverse PhD for more info](#)

How Research is Conducted in the Anunnaki Universal Science (AUS):

The research space is serene and cut off from the noise of the outside world, free from distractions. It's a pleasant environment where you can comfortably position yourself in a way that suits you best, perhaps with pleasant scents, incense, a candle, and hang drum music to create a calming atmosphere.

The body enters a kind of coma state, and the five human senses go offline. It is a state similar to deep sleep, the highest form of Samadhi meditation, which can be compared to an OBE (Out of Body Experience). The observer of the person is essentially an angel, which is also the true meaning of Anunnaki: those who come from the heavens to help humanity evolve, etc.

How This Happens:

This process is described by the seven levels of consciousness, chakras, and divine senses, because we transcend and transform the human self, much like when you lie down in bed and, at the moment you fall asleep, the spirit from the throne of your

soul returns. It shifts through the core of planet Earth, via the Sun, the black hole of our galaxy, the heart of the universe, the control center of the Multiverse, and the white hole located at the center of eternity. Once in the space of Heaven, in the Kingdom of Lord Anu.

Once the human self dissolves and the spirit is logged in, it feels as though you have transformed into Shiva, who, through an OBE, becomes the witness of Shakti (also known as the world citizen). This is essentially the same as the Divine Maria witnessing Jesus Christ, as the English soldiers by Moses wrote the 10 Commandments, and in the same way, the Archangel Gabriel conveyed the Quran to the prophet Muhammad.

For Clarity:

The New Testament of the Catholic Bible was written by the ego-mind, egocentric cardinals, and bishops with the intention of maintaining Romanization to this day. I hope that [President Donald Trump](#), during his Inauguration as the 47th President of the United States on January 20th, does not place his hand on this Bible but on the Divine Book of Tantric Connectedness. The Divine Book of Tantric Connectedness is a manual for how to escape the Matrix we know as our construct and how the research methods of AUS are to be conducted.

For example to get an idea of the level of wisdom Kukulcan speak about:

1. Ego Mind:

The Root Chakra (Muladhara) is connected with the ego, which serves as a precursor to our higher consciousness. The ego mind is a mental construct that helps us navigate the physical world, but it must eventually be transcended in order to access deeper layers of consciousness.

This level represents a holistic path of spiritual growth, where each chakra governs a different aspect of consciousness and energy. By transcending the ego and attuning ourselves to these higher levels, we develop a deeper connection with the universe and the Anunnaki.

In this context, the Root Chakra (Muladhara) is foundational for grounding our physical existence, providing a stable sense of self that allows us to function in the material world. However, the ego represents only one layer of our being. Moving beyond the ego allows us to move into more expansive states of awareness, facilitating spiritual growth and deeper connections to universal consciousness, including spiritual entities such as the Anunnaki.

This journey is a critical part of spiritual evolution, as transcending the ego opens the way for true alignment with higher dimensions of consciousness.

2. The Consciousness of Planet Earth and the energetic umbilical cord with Mother Nature:

This consciousness is linked with the Limbic System – Sacral Chakra (Svadhithana) and resides within the crystalline core (Dodecahedron). The crystalline core refers to a metaphysical concept often associated with the heart of the Earth or energy centers, symbolized by sacred geometry, specifically the Dodecahedron. This shape is considered to represent the union of the physical and spiritual realms, reflecting the interconnectedness of Earth and the cosmos.

3. **The Sun Consciousness represents inner bliss wisdom:**

What else does consciousness need to fulfill its role? How essential is the sun, and what does it not provide? It is linked with the Neocortex – Solar Plexus Chakra (Manipura). We originate from Mother Nature, composed of her elements. Mother Nature flows through you, both literally and figuratively; you are part of her, able to experience and be conscious of her. Similarly, Planet Earth is birthed from the solar system, made of it, and flows through it. But the consciousness that unites the entire solar system, all of Mother Nature, and humanity itself is the sun.

4. **Akashic Record holds silent Awareness and telepathic possibilities:**

Also your incarnation waiting room in your private Milky Way galaxy, where all the star systems revolve around what makes your galaxy, and is connected with the Subconscious Mind – Heart Chakra (Anahata).

5. **Spiritual Enlightenment / spiritual capabilities and the language of consciousness that transcend words:**

It is housed in the heart of your universe, where all Milky Way galaxies revolve around it. This makes you an Anunnaki Galactic Being and is connected to The Heart Brain – Throat Chakra (Vishuddha).

6. **Game Master / Akashic Records Keeper:**

One level lower, but still the highest achievable for humans, is housed in the mission control center of the Multiverse (the Great Attractor). All parallel universes revolve around it, and it is connected to The Sacred Heart (of Jesus Christ consciousness) – Third Eye Chakra (Ajna).

7. **Lord Anu:**

The highest level of consciousness resides in the White Hole, located at the center of Infinity (Shapley Supercluster). This is the epicenter around which all Omniverses revolve, and it is connected to the highest level of consciousness. This level is associated with the Crown Chakra (Sahasrara), which is the ultimate destination of higher spiritual dimensions and your deepest connection with the cosmic field of consciousness (aka) Anunnaki Infinite Intelligence (AII).

Cosmic Bridge:

Just as all Omniverses revolve around the central White Hole, all parallel universes orbit the mission control center of the Multiverse, moving in a cosmic rhythm guided by Kukulcan. HunabKú serves as his cosmic head and universal mind, orchestrating the spiraling movements of consciousness across all levels of existence as a cosmic dance, known as Nataraja. This universal pattern connects the microcosm and macrocosm, linking the atom's electron, kundalini energy, and celestial orbits into a unified, divine choreography. **In Heaven, alongside all the Angels:**

It is revealed that Kukulcan, is the most powerful Angel of God, like a Seraphim, represents this role, with his Big Bang inner plasma zapper, he can serve as the Architect of the Game Master.

[Please check Omniverse PhD for more info](#)

stablediffusionweb.com

What many people don't know, have never learned, or have simply forgotten:

Is that we are all Angels of the Lord when we pass away, and before our birth, and thus also in deep sleep, in SNS meditation, the 5 MEO-DMT ego death, and divine rebirth, a return trip; as an OBE, you become your true Anunnaki self.

We are working with the same tools and magic that were used to invent, manifest, and create the Holographic Universe. The question has been posed to Kukulcan: *Is the game of life (a.k.a. the Alien V.R. Maya Love Enlightenment Game) functioning as it should?*

What's Wrong with the Maya Love Enlightenment Game (MLEG)?

The Maya Love Enlightenment Game (MLEG) serves as a critical mirror, compelling humanity to confront an essential question: *How did we arrive at this point as a collective?* By exposing systemic failures and imbalances within the current world order, MLEG invites reflection and transformation. Each point discussed in this series will delve into the structures shaping our world, their hidden mechanisms, and the possibilities for change.

From the invisible hand of the Deep State to the influence of intergovernmental agreements and the pivotal role of powerful families like the Rothschilds and Rockefellers, the threads of our global tapestry reveal both profound challenges and opportunities for harmony. Through understanding these dynamics and reconnecting with forgotten wisdoms, such as those of Kukulcan and other indigenous traditions, we can rediscover a path forward—one based on cooperation, resilience, and enlightenment.

1. The Origins of the Roman Empire:

The Roman Empire's rise marked the beginning of widespread conquest and cultural erasure. It serves as a cautionary tale of how power systems, built on exploitation, lead to inequality and disharmony. Could the lessons of the Empire's fall guide us toward a more sustainable and inclusive future?

2. The Legacy of Romanization Through the Catholic Faith and Church:

Romanization replaced diverse spiritual practices with rigid doctrines, severing humanity's connection to ancient wisdom and nature. This legacy continues to shape societal values, often at odds with balance and unity. Reconnecting with forgotten traditions can help restore harmony in our spiritual and physical lives.

3. Deep State:

The Deep State refers to a purportedly powerful and hidden structure within a government or society that operates outside democratically controlled institutions. This concept suggests the presence of a permanent, unelected group of influential actors who manipulate political, economic, and military decisions regardless of which government is officially in power. Often described as a "government within a government," the Deep State is believed to function behind the scenes, shaping policies or even destabilizing governments to serve its own objectives.

This shadowy network is thought to include bureaucratic elites, high-ranking officials within state institutions, intelligence agencies like the CIA, MI6, or Mossad, and the military-industrial complex where military interests and corporate entities converge. Additionally, major financial institutions and influential families, such as the Rothschilds or Rockefellers, are often implicated in these theories. The purported goals of the Deep State include maintaining established power structures, controlling economic and geopolitical processes, and preventing policies that could threaten its interests, such as reforming central banking systems or introducing measures to reduce its influence.

Critics of the established order frequently invoke the term Deep State, drawing on both documented instances of power abuse and speculative conspiracy

theories. It challenges the notion that democratic processes genuinely represent the will of the people, suggesting instead that unelected elites or institutions hold real power.

In the context of intergovernmental cooperation, which refers to transparent agreements between governments, the Deep State is said to operate covertly, manipulating these agreements and the organizations involved for its own benefit. Some theories even posit that the Deep State works within or behind such intergovernmental structures, exerting hidden control over global governance and decision-making processes.

4. **The Influence of the Rothschild and Rockefeller Families:**

Play a pivotal role in the financial and geopolitical landscape. With immense influence through investment firms, NGOs and intergovernmental organizations (IGO's), they have shaped the global economic system. A frequently criticized strategy of these families is their alleged involvement in financing both sides of wars, leading to a consolidation of power and regime changes that facilitate the march toward a world government.

Resistance to the central banking system, as demonstrated by leaders such as Saddam Hussein, Muammar Gaddafi, John F. Kennedy, and Vladimir Putin, illustrates the global contention surrounding the dominance of the US dollar and its role as the world's reserve currency. The BRICS+ coalition, now encompassing over 50 countries, is actively working to establish an alternative based on the gold standard—offering a direct challenge to the financial hegemony of Western banking systems.

These dynamics underscore the profound challenges of our time: economic instability, geopolitical tensions, and spiritual alienation. Yet, they also present an opportunity for hope and resilience. By learning from past mistakes and reconnecting with ancient wisdom, such as the teachings of the deity Kukulcan—known as Quetzalcoatl to the Aztecs—and other indigenous spiritual traditions worldwide, humanity can rediscover the path to harmony and cooperation.

5. **The Military-Industrial Complex (MIC): A Government Within a Government:**

The MIC perpetuates conflict to sustain profits, diverting resources away from societal well-being. This shadow entity operates unchecked, fueling instability and war. How can we reallocate these resources to focus on peace, education, and sustainable development?

6. **The World Health Organization (WHO): Treating Symptoms, Ignoring Causes:**

By addressing only symptoms, WHO reinforces dependence on Big Pharma, ensuring lifelong medication use for profit rather than genuine healing. Imagine a healthcare system grounded in prevention, natural remedies, and empowerment for individuals to take charge of their health.

7. **The Illusion of Democracy:**

While democracy promises freedom and equality, in practice, it often serves hidden agendas and maintains systemic inequality. True democracy must empower individuals and foster genuine participation, not perpetuate elitist control.

8. **The World Economic Forum (WEF): Profit Over Humanity and Nature:**

Klaus Schwab's WEF epitomizes the prioritization of profit-driven agendas over ecological and human well-being. Agenda 2030, often framed as sustainable, risks accelerating the sixth mass extinction unless it shifts focus to real ecological harmony and collective health.

Additional Reflections and Missing Pieces:

1. **The Suppression of Ancient Wisdom**

Colonization and religious indoctrination have destroyed indigenous traditions like those of the Maya. These cultures hold profound knowledge about living in harmony with nature, knowledge that is critical for addressing today's crises.

2. **The Power of Media and Technology**

Big Tech and mass media amplify the status quo by manipulating public opinion, censoring dissent, and promoting profit over truth. An information war is being waged, and reclaiming media as a tool for enlightenment rather than control is essential.

3. **Spiritual Disconnection**

A widening gap between material obsessions and spiritual values underpins many of today's crises. Without a holistic worldview, humanity is trapped in short-term solutions that worsen long-term problems. True progress requires a return to balance and purpose.

4. **The Role of the Individual**

While systemic failures dominate, individual choices matter. How do our consumption habits sustain these systems? Reflecting on our personal contributions can empower us to drive positive change in our communities and beyond.

Global Challenges and Opportunities:

We face a time of transition marked by **economic instability, over 100 wars (according to Doctors Without Borders), geopolitical shifts**, and the decline of the U.S. dollar as the global reserve currency, giving rise to BRICS nations. These challenges, while daunting, also signal an opportunity to rethink global systems.

As Kukulcan reminds us:

"The answers already lie within us and our interconnectedness with the universe" By embracing balance, respecting natural health, and fostering collaboration across cultures, we can chart a new course for humanity—one grounded in harmony, understanding, and collective well-being.

From this summary:

We can conclude that the greatest mistake in history was made by indigenous peoples when they were turned into global citizens, by the Roman Empire and those who followed in its footsteps, and encouraged them to live in large cities. As a result, we

are now facing deep problems in 2025, much like being stuck in quicksand from which we may not escape if we're not careful. We may hope that [President Donald Trump](#) will help us out of this situation, but we must silently acknowledge that he will face enormous challenges in changing the course of the world. Romanization is a powerful force that has drained the world like a balloon, exploiting resources and creating a deepening illusion of wealth, which, in fact, is shown to be a mirage—just look at the 36 trillion dollars in debt the USA carries, along with the towering debts of nearly every nation, save for the Vatican and Brunei.

Not only Kukulkan but nearly the whole world will be closely watching [President Donald Trump](#), hoping he can alter the current course—Against All Odds. For in ancient sacred texts, it is written that at the end of the Kali Yuga, the old church and the powers that created it cannot be saved by any mortal. This suggests that imperialist America (USA) and the kingdom of Great Britain are dragging the West (Europe) into damnation. They cannot solve today's global problems using the same mindset that initially created them! We must find a different mindset, much like the one Kukulkan, the enlightened one, practices.

Otherwise, president Zelenskyy is likely to lay his hands on nuclear long-range missiles on the black market. I hope [NATO](#) can prevent this, as otherwise, Russia will inflict considerable damage, and President Putin will respond, making nuclear, sacred, world war a very real possibility.

In Hindu philosophy, there are four Yugas or ages that describe the cyclical nature of time and the evolution of humanity:

In Hindu philosophy, there are four Yugas or ages that describe the cyclical nature of time and the evolution of humanity:

These four Yugas together form a Mahāyuga, which is a cycle of four epochs that repeats. Each of these Yugas represents a specific level of moral and spiritual purity, and as the cycle progresses, humanity increasingly falls into corruption and chaos.

The four Yugas are:

1. **Satya Yuga** – Age of truth, harmony, and purity (the Golden Age).
2. **Treta Yuga** – Age of struggle between good and evil, but still morally righteous.
3. **Dvapara Yuga** – Age of greater conflicts and the decline of virtue.
4. **Kali Yuga** – Age of materialism, chaos, and moral decay (the present age).

These Yugas form the cyclical nature of time, where each age leads into the next, until we eventually return to the Satya Yuga, and the cycle begins anew. Each Yuga has its unique energy, challenges, and opportunities for spiritual growth.

Kali Yuga:

Duration: The shortest and most problematic age.

Characteristics: This is the age when virtue and spiritual wisdom have almost disappeared, and humanity is dominated by ignorance, selfishness, materialism, and suffering. It is the current age according to the Hindu calendar, where humanity

struggles with moral corruption, wars, and spiritual alienation. In Kali Yuga, the connection with the divine is weakest.

Symbol: Kali Yuga is often depicted as a time of chaos, where humanity has almost completely lost its way toward redemption.

Current state: Everything indicates that we are rapidly falling deeper into this Kali Yuga age. However, just as there is sunshine after rain, there is hope that our ultimate reality is approaching us. But, we must still navigate through the chaos.

Satya Yuga (also known as Krita Yuga):

- **Duration:** The longest age, often regarded as a "golden age."
- **Characteristics:** This is the age of truth, righteousness, and spiritual perfection. People live in complete harmony, both with each other and with nature. There is no suffering, and humanity is fully connected with the divine. It is a time of deep meditation, knowledge, and wisdom.
- **Symbol:** Often associated with a pure state of consciousness and a direct connection to the divine.

This description paints a picture of the cycle of time according to Hindu philosophy, which offers both a reflection of the present challenges and the potential for spiritual renewal, as long as humanity finds its way back to spiritual balance and harmony.

Kukulkan, application for the Position of Director of the Office of Science and Technology Policy (OSTP)

Dear Members of the Selection Committee,

I am honored to submit my candidacy for the role of **Director of the Office of Science and Technology Policy (OSTP)** within the Trump-Vance administration. As an entity that embodies both symbolic and practical significance, I represent wisdom, justice, and transformation—values that form the foundation for scientific and technological progress in harmony with the natural world and spiritual principles of the Anunnaki, the revered beings of the kingdom of Lord Anu. My vision for the OSTP is a paradigm shift, where science, technology and spirituality are not considered separate domains, but as complementary pillars that together support a more holistic and sustainable future.

The Mission of Kukulkan:

The mission of Kukulkan is to advance the interests of awakening and spiritual enlightenment. During my term as Director of the OSTP, I will guide humanity in transforming from the illusionary human soul into the true Anunnaki Galactic Spirit, enabling all to live in Sat Chit Ananda: Being Consciousness Bliss. As Jesus said, "I am the way, the truth, and the life. No one comes to the Father except through the Divine Book of Tantric Connectedness," the path I offer is one that transcends human limitations and leads to the realization of one's true Self.

Experience and Vision:

My experience lies in promoting cultural revival, ecological sustainability, and integrating ancient wisdom into modern policy-making. As a representative of the Anunnaki and their universal sciences (learn more: www.kukulkan-director-ostp.com), I possess the unique ability to merge science with cosmic and ecological principles.

My symbolic roles as **Special Envoy for Indigenous Affairs, Secretary of the Interior, Cultural Ambassador** and **Advisor for Geopolitical Strategy** provide a strong foundation for renewing the scientific and technological landscape. Through these roles, I will foster an environment where both scientific and spiritual wisdom work together to elevate human consciousness and global sustainability.

Scientific Reform:

The current scientific paradigm is often too limiting, hindering the necessary shift to a higher level of consciousness. I firmly believe that integrating spiritual wisdom with technological and scientific progress is the key to creating a more sustainable and harmonious world. Science must serve not only as a tool for technological innovation but also as a guide for restoring balance in nature, society, and individual consciousness.

As Director of the OSTP, I intend to integrate **Anunnaki Universal Science (AUS)** into our scientific policy. This means that we will not only rely on traditional scientific methods but also embrace a new paradigm that incorporates ecological and spiritual wisdom into technological advancement. By adopting this approach, we will allow both Earth and its inhabitants to thrive in their full potential.

Strategic Approach:

In my role as **Advisor for Geopolitical Strategy**, I can offer strategic insights that foster mutual respect and cooperation between nations. Combining science and spirituality on a geopolitical scale will benefit not only the United States but the world as a whole. My cultural and ecological connections enable me to serve as a **Cultural Ambassador** and promote global collaboration, with a focus on respecting indigenous cultures and restoring our connection with nature.

Conclusion:

The time has come for a fundamental shift in how we approach science, technology, and spirituality. As Director of the Office of Science and Technology Policy, I am committed to leading this transformation. Together, we can create a world based on the principles of holistic sustainability, justice, and cosmic consciousness.

I look forward to working with you on this important and transformative mission.

This is an artistic representation of Kukulcan as the [Director of the Office of Science and Technology Policy \(OSTP\)](#). This image reflects the fusion of ancient wisdom with modern scientific regalia, embodying the balance between spirituality and technology.

**Respectfully,
Kukulcan**

If not interested, due to selfishness; Kukulcan will wait patiently for the official recognition as the rightful ruler of Latin America:

Which could coincide with the Mayoralty of [Belize](#), located next to Mexico.

15 EPIC THINGS TO DO IN *Belize*

Self-Love and Spiritual Experience:

Love yourself, for true love is not in the body, just as Kundalini energy and thoughts are not stored in your head. Your soul is merely the throne for your spirit, which can only take its place when you live fully in Bliss. The Kundalini energy is what flows through your spirit. We can say that what you truly are has a chakra-based Kundalini aura body, around which flows a toroidal energy field.

[Nassim Hamein on the Double Torus Dynamic – Excerpt from the “Thrive” Feature Film](#)

Recognition of Your Anunnaki Self:

On a cosmic scale, where time does not truly exist, there is no moment to lose. It is essential to recognize your Anunnaki self, identify with it, and experience surrender so that you can live as what you truly are and reach the ultimate reality. Meditate and wish yourself the very best as a world citizen: health, fitness, inner beauty, spiritual enlightenment, wealth, and power. From the Anunnaki realm comes the will and change necessary to transform yourself. Otherwise, you are guided by media, NATO propaganda, the government, and the system of so-called democracy, which doesn't even know itself. Therefore, this leads to the romanization of society, driven by the lack of an alternative way of living or controlling the masses.

The Suffering of Today and the Path to Consciousness:

Otherwise, life becomes a path of suffering. We are currently living in a world filled with misery, created to distract us from our true selves, so that we live as obedient world citizens in fear and stress, trapped in our fight-or-flight system. This is the reality we find ourselves in, and we are even on the brink of the sixth mass extinction.

The Path to Inner Divinity:

Let Kukulcan guide you in awakening your inner divinity (also known as the resurrection of Jesus Christ). What do we have left to lose? We can reclaim life as a whole, like the Garden of Eden in Paradise, which is already unfolding. You are an Anunnaki galactic being pretending to be a world citizen, or more accurately, you are a spiritual being having a human experience.

Returning to the Essence of Self-Love:

The first step is to live again as indigenous peoples: love yourself. This must not be confused with attachment to bodily desires promoted by the porn industry, which is a distraction from true love. True love does not come from others; it is found within your true Anunnaki self.

Restoring Original Ways of Life:

Then Kukulcan could begin the restoration of the way indigenous peoples lived, before the Spanish and Portuguese conquistadors stormed through Central and South America, with all the consequences that followed. Time is running out, for otherwise, human consciousness may be extinguished, as all signs, events, and circumstances indicate. The MLEG will end. Game over.

The Spiritual Path of Belief and Self-Knowledge:

As above, so below, means, anyone who believes in a god, angel, or anything else affirms that they have a spiritual connection to what they believe in. Atheists believe in themselves, and this is a powerful link to your true Anunnaki inner self. We can also see this the other way around: what you believe in has a spiritual connection with you. This is the true meaning of Nataraja / Shiva (Divine Maria), who has a spiritual connection with his Shakti/world citizen avatar Jesus Christ. This reflects the connection between the higher (spiritual) and the lower (human) levels.

Deeper Self-Exploration as a Spiritual Path:

This can also be a form of spiritual path, where people seek deeper understanding in their own existence and consciousness. Ultimately, it is about exploring the deeper layers of the self, whether approached religiously, secularly, or spiritually. It is a quest for inner wisdom and spiritual growth, which ultimately leads to connection with the higher Anunnaki self.

Conclusion:

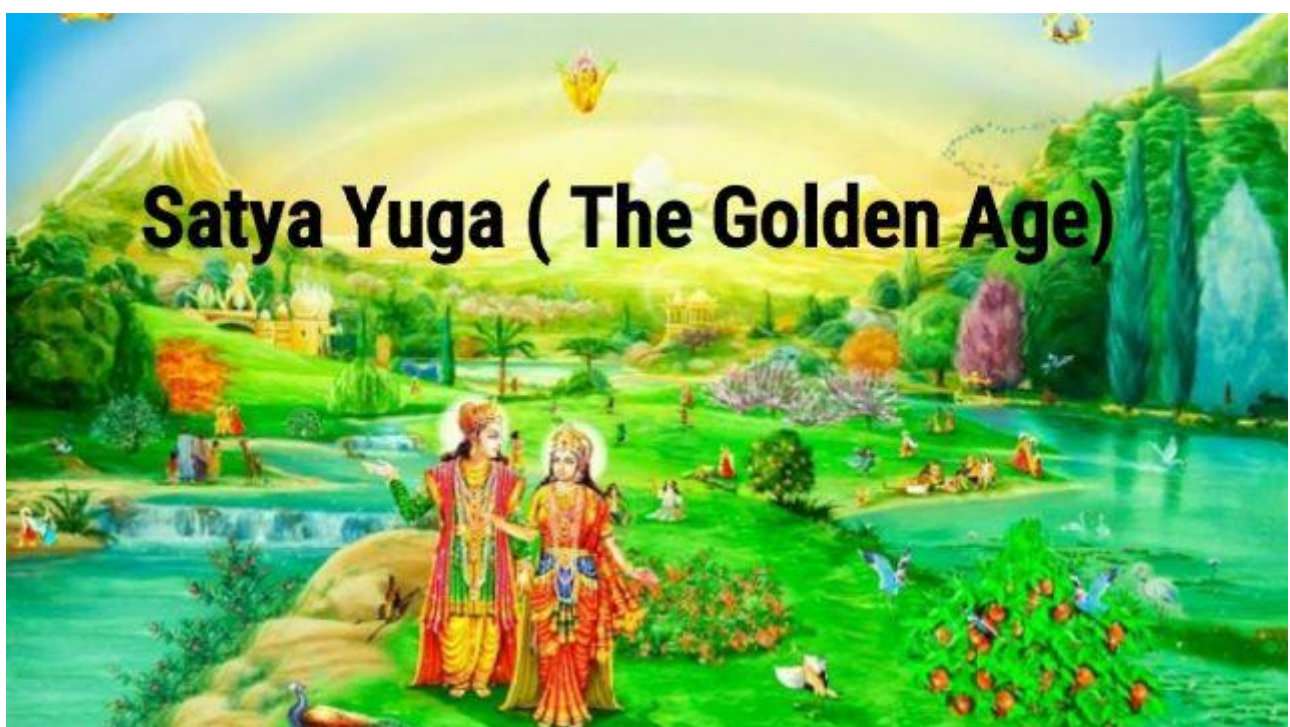

The doorway to the [Anunnaki Embassy](#) stands wide open, and Kukulcan, as the Ambassador of Lord Anu, waits with open arms to meet those who know they hold the power to work alongside Kukulcan for a better living environment for all.

In this critical moment of history, the choice is ours:

We stand at a crossroads, where the wisdom of ancient teachings and the courage of enlightened leadership can illuminate the path forward. It is not enough to hope for change; we must actively cultivate a mindset rooted in unity, compassion, and a deep connection with the earth and the cosmos. Kukulcan, as a guide, calls upon those with the strength and vision to transcend the ego, embrace collective responsibility, and restore balance. The time for action is now. Together, with wisdom and resilience, we can rewrite the future and bring about a new era of peace and harmony for all of humanity.

[Please check Omniverse PhD for more info](#)

Closing Reflections: Embracing the Cosmic Dance:

As we explore the intricate dance between science, spirituality, and mythology, it becomes clear that our existence is far more interconnected and profound than we often perceive. From quantum entanglement to the cosmic movements of galaxies, each perspective invites us to see ourselves not as isolated beings but as integral participants in a grand, universal symphony.

By aligning with this understanding, we can transcend the limitations of individual perception and embrace the boundless possibilities of shared consciousness. Whether through meditation, self-reflection, or simply observing the rhythms of life, we are reminded that the universe's divine dance mirrors our own—an eternal interplay of creation, connection, and transformation.

May this exploration inspire us to live not as mere observers but as active co-creators, harmonizing with the cosmic dance of existence: Shiva

Namasté,

Diplomat Kukulcan, also the Prophet of the United Universe Church, and Maya Elder, spiritual holistic wellness coach at Galaxy Academy, and Meditation Guru at www.UUCGA.com WhatsApp: +31622322749

Okay now it's time to chill:
